» » Chantelle group automates local tax management processes

A world leader in lingerie, the Chantelle group's development is driven by strong brands such as Chantelle, Passionata and the Darjeeling and Orcanta networks.

Present in 23 countries, the group has extensive expertise in feminine beauty products and know-how spanning all areas from creation to distribution.

Elegant and contemporary, Chantelle is a global brand that accounts for nearly half of the group's revenues.

Automate nearly 200 local tax returns

As a result of its strong growth, the Chantelle group faced the dual challenge of having to handle an ever greater number of local taxes every year and a large tax liability. The group has 185 shops in France and continues to expand, opening six new shops a year on average, which means it has to file more than 150 local tax returns. It was therefore becoming critical to acquire a tool capable of generating large volumes of local tax returns.

CHALLENGE

Solutions

A single, centralized, EDI-GDI-certified tax platform

The Generafi tax software solution facilitates, optimizes and secures local tax returns for the Chantelle group and its 185 lingerie shops. With Generafi GTP, the group is able to prepare, approve and file its local tax returns with ease.

Generafi GTP lets Chantelle prepare local tax returns automatically by importing accounting data from group and shop information systems. This solution also offers advanced tax management features such as online checking of local tax returns, standing orders and simulations of tax owed.

Today, the Chantelle group uses the flagship modules of the Generafi suite: GTP, corporate income tax reporting and VAT.

Shorter cycles, fewer errors and greater efficiency

“Automating preparation of local tax returns had a direct impact on the time our company’s accounting personnel were spending on them. We’ve reduced preparation time from 2 or 3 days to less than 1 day since we started using Generafi,” says Antoine Ruppli, Chantelle group Accounting and Tax Manager.

And that’s not all. The many other benefits derived from this solution include fewer errors due to automatic data input and calculations, increased synergies through configuration of the same settings across all group entities, and greater ease of use for non-IT specialists. For the Chantelle group, having a single, centralized tax management platform is a key asset.
